

JAV745 Fall 2019: Lab 5 - (4%) - Draft

Dr. Eden Burton

School of ICT, Seneca College of Applied Arts and Technology

Fall 2019

Due Tuesday November 19, 2019 - 11:30 pm

Instructions

Please read the instructions carefully and follow the naming conventions specified for each question. Solutions must be submitted in the Blackboard Dropbox created for Lab 5.

Note that the deadline is strictly enforced. The system tracks the exact time that submissions are uploaded. **There is a 10% per day penalty for late submissions.**

Additional Notes

- You may use any IDE for development but note that demonstrations and professor testing will be done exclusively on the command line. Ensure that you test your programs on the command line before submission.
- ensure that your programs are documented using *JavaDoc* standards

Question Descriptions

Question 1) In this lab, you will implement and compare common algorithms used on data structures.

Use the given Reading class to create objects. *For those interested, this is an example of the Factory pattern*

Create a class called Tester which you will use to conduct your experiments. In the main() method you create a configurable number of objects. Allow the value to be passed in to the program as a parameter. As you create the objects place them in an array (not a collection). You will invoke one of the sort routines (specified below) and print the sorted array into a text file. One row per object with a format as defined in the Reader.toString() method. The user should be able to select the sort method. Your timing results should be displayed on the console.

In another static method, implement the insertion sort as described in section 19.7 of the text. Order is based on the windspeed, then the temperature. Measure the elapsed time for the algorithm takes to execute using something like System.nanoTime(). Do the same for the insertion sort (as in 19.8)

Run the application a few times and summarize your results. Explain your results in a separate written document (submit in pdf format).
